Western Australia atlas of mineral deposits and petroleum fields 2009

compiled by

RW Cooper, PB Abeyasinghe, and DJ Flint

This ATLAS shows the location of Western Australia's mineral deposits and petroleum fields, set against a background of simplified geology and cadastral information. The publication is an update of the 'Western Australia atlas of mineral deposits and petroleum fields 2007'.

This publication draws together data from a number of sources. The minerals information comes from the Department of Mines and Petroleum (DMP) 'Mines, mineral deposits, and prospects' database (MINEDEX). Since its inception in 1984, MINEDEX has recorded the locations and other attributes of all mines and deposits with defined resources. Historic production sites were included in MINEDEX in 1999 and these sites are also shown in this ATLAS. In June 2008 MINEDEX was merged with both the geology of mineralization database (WAMIN) and the Inventory of Abandoned Mines database (WABMINES). Major mining-related infrastructure sites, i.e. nickel, alumina, and silicon smelters or refineries, have also been included. Site types in the MINEDEX database that are not displayed in this ATLAS include prospects, exploration targets, occurrences, geological observations, most infrastructure types (excluding the smelters and refineries), and WABMINES mine features. A total of 17 067 sites, some with commodities displayed, are plotted in the ATLAS. Names of about 10% of those sites (1765 sites) are printed on the maps and appear in the index pages, with priority given to operating mines. For the first time all construction material mines and deposits have been included, with the subset of Dimension Stone sites being named and given the full symbol size. All other construction material sites (e.g. for rock, aggregate, gravel, sand, limestone, etc.) have not been named, or given commodities, and are shown with a smaller symbol size. Sites with confidential location information are not shown.

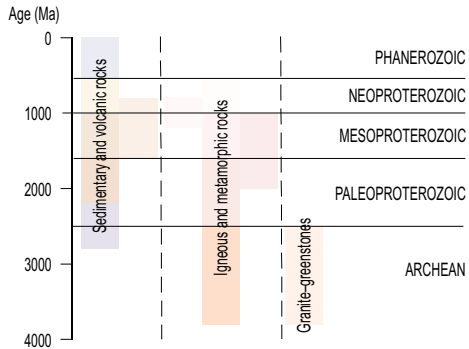

Mineral exploration data submitted to DMP in mineral exploration reports can be obtained from the 'Western Australian mineral exploration' database (WAMEX). Petroleum and non-mineral downstream processing operations can be viewed on DMP's annually updated 'Major resource projects' map. Petroleum data have been

extracted from both DMP's 'Western Australian petroleum information management system' database (WAPIMS) and from the Petroleum and Royalties Division's information in the Minerals and Petroleum section of DMP's website. Only major fields and recent major discoveries are shown, and are identified by a representative well for that field. Enquiries regarding petroleum discoveries, reserves, development projects, and production should be addressed to DMP's Petroleum and Royalties Division.

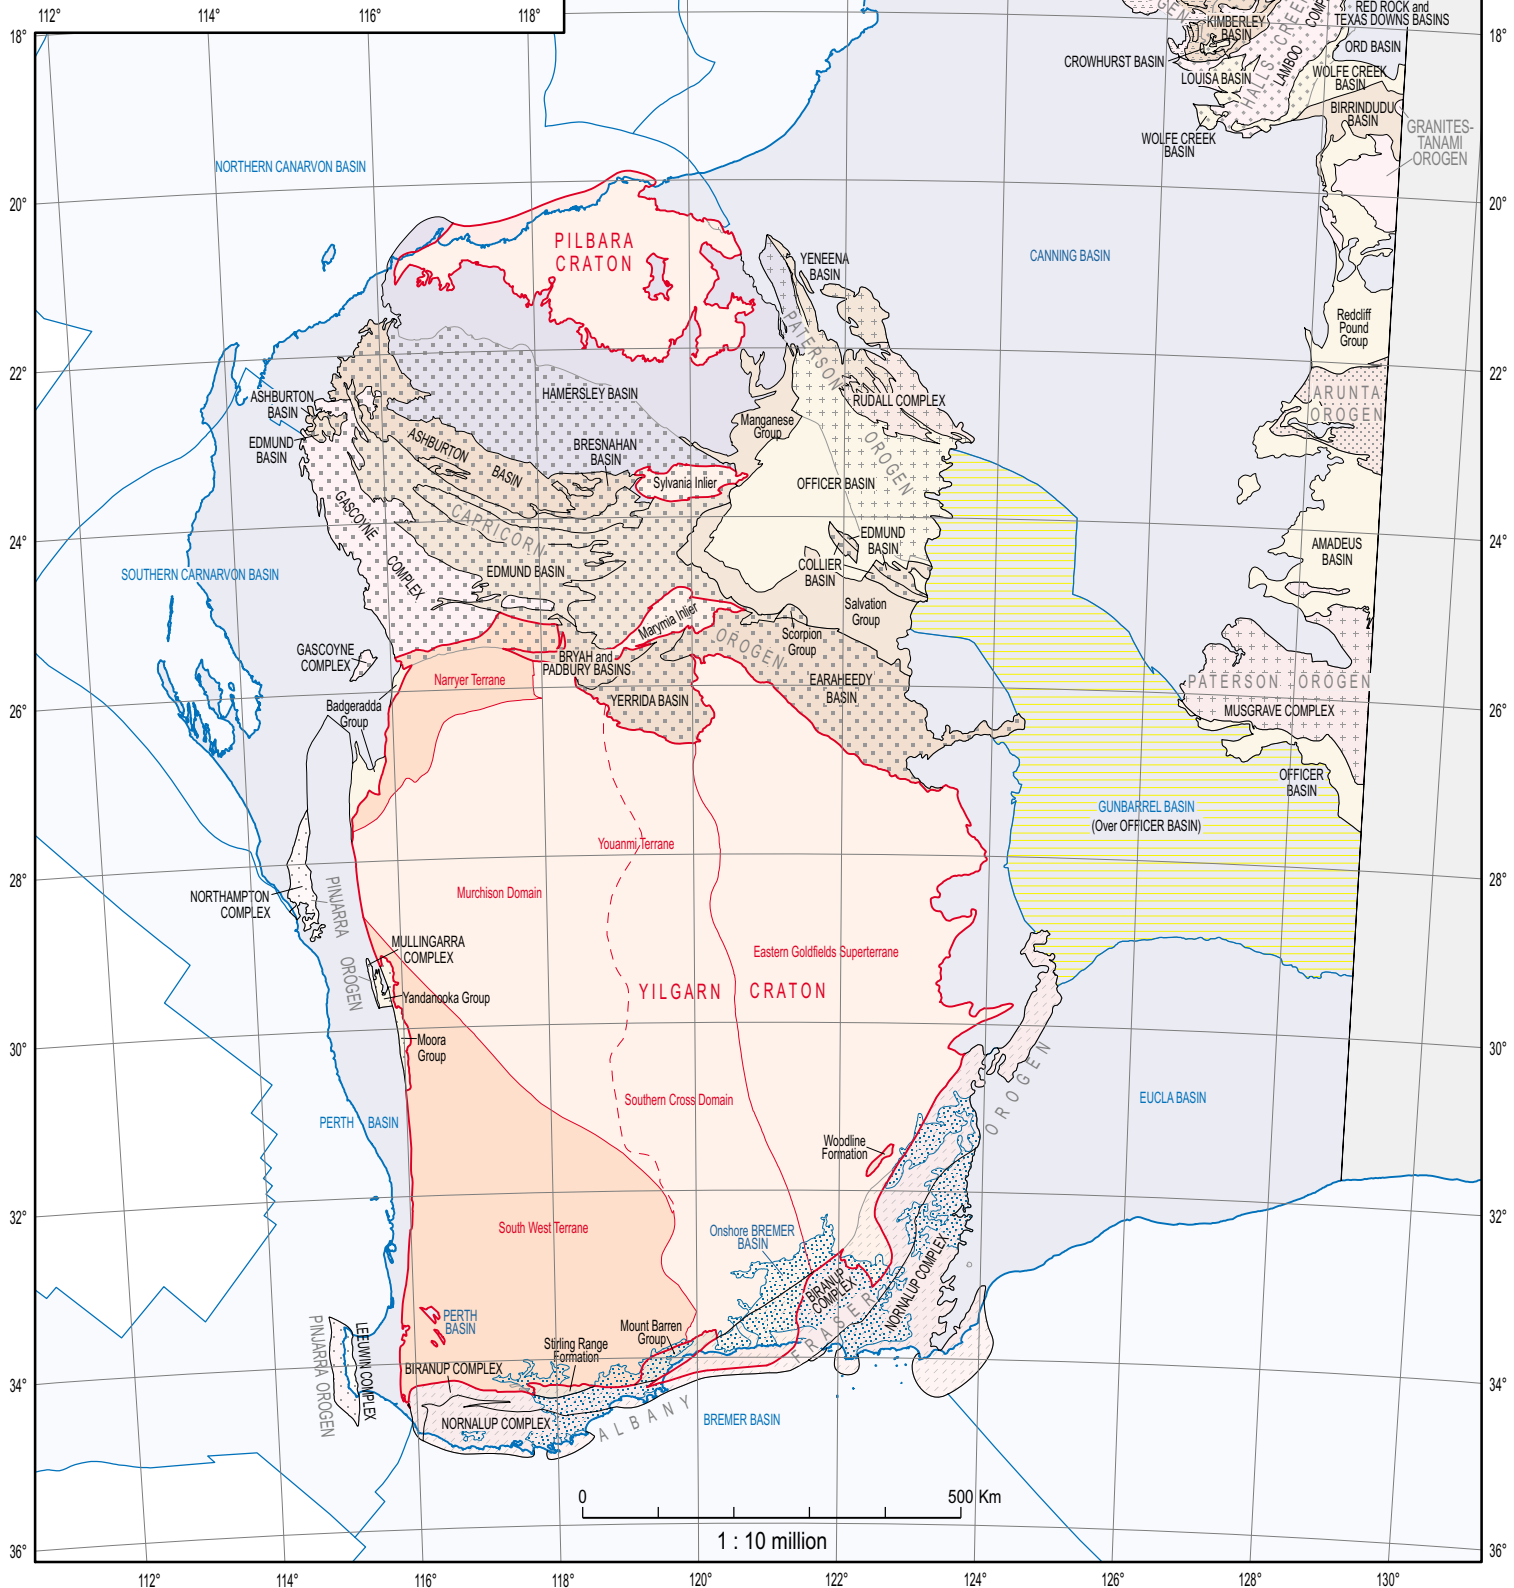

The index at the back of the ATLAS categorizes named sites by their stage of development, using 'o' for operating sites and those currently being developed for commercial production, 'u' for undeveloped deposits, and 'c' representing closed operations including historic mine sites, and those currently under care and maintenance at October 2008. On the maps, named operating sites appear in black, whereas closed or undeveloped named sites are shown in grey. Commercial ownership of named sites (and projects) is listed in the index. Historic mine sites are not linked to current projects, so commercial ownership has been left blank. Mineral commodities, ownership, stage of development, and location of each site have been extracted from the MINEDEX database, which is continually being updated. Digital downloads or live direct web enquiries are both available from Online Databases at <<http://www.dmp.wa.gov.au>>. Further enquiries as to the status of the sites and projects included in this booklet can be made by phoning +61 8 9222 3624 or by email to don.flint@dmp.wa.gov.au.

All maps in this publication have been produced using the Albers Equal Area Projection (Geocentric Datum of Australia 1994), with central meridian 121°00'E and standard parallels 17°30' and 31°30'S.

TO LOCATE A PROJECT

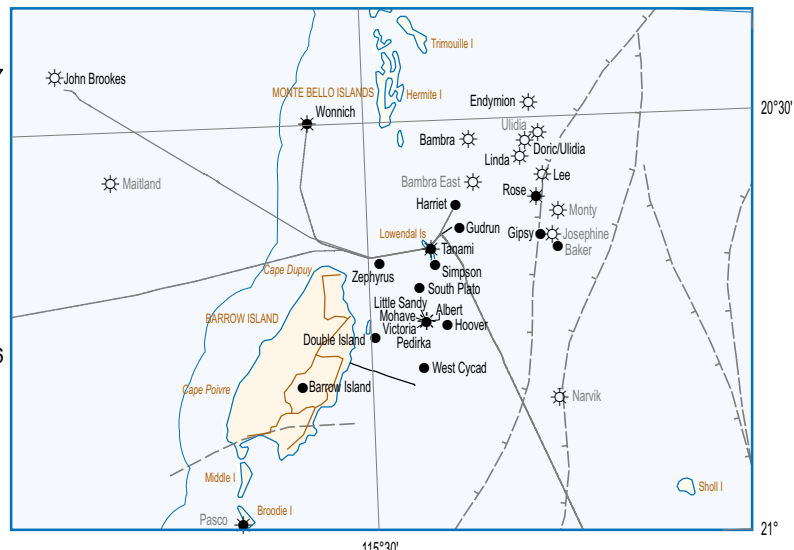

Two code numbers are used to locate a site in this booklet. The first code number is the map number in this atlas, and the second represents the 1:100 000 map sheet number. From the four digit map sheet number, the first two digits give the east - west coordinate, and the second two digits the north - south coordinate.
