Geological Survey of
Western Australia

Geological Survey of Western Australia products 2009-10: books, maps, and data packages

The Geological Survey of Western Australia (GSWA) is a division of the Department of Mines and Petroleum. Since the 1880s, GSWA has been gathering, synthesizing, and publishing information on the State's geology, and mineral and petroleum resources.

GSWA produces a large number of books, maps, and state-of-the-art databases for the benefit of the Western Australian community, including prospectors, explorers, miners, and investors. This information provides the building blocks for the design of exploration programs in Western Australia. It is also critical to Government policy and decision making, particularly on economic and land use issues.

This package contains PDF files of Geological Survey of Western Australia books, maps, and references to data packages published from 1/7/2008 to 30/6/2009.

This package contains PDF files of Geological Survey of Western Australia books, maps, and references to data packages published from 1/7/2009 to 30/6/2010.

Products can be accessed using the Search Products function (see contents, left of screen). Only references to data packages are provided as they are too large to be distributed on this DVD.
