Western Australia atlas of mineral deposits and petroleum fields 2013

compiled by

RW Cooper, PB Abeysinghe, CA Strong, and F Irimies

This ATLAS shows the location of Western Australia's mineral deposits and petroleum fields, set against a background of simplified geology and cadastral information. The publication is an update of the 'Western Australia atlas of mineral deposits and petroleum fields 2011'.

This publication draws together data from a number of sources. The minerals and construction materials information comes from the Department of Mines and Petroleum (DMP) 'Mines, mineral deposits, and prospects' database (MINEDEX). Since its inception in 1984, MINEDEX has recorded the locations and other attributes of all mines and deposits with defined resources. Historic production sites added to MINEDEX in 1999 are also shown in this ATLAS. In June 2008, MINEDEX acquired the data from two other systems — 'mineral occurrences' (WAMIN) and the Inventory of Abandoned Mines database (WABMINES). The ATLAS also includes major mining-related infrastructure sites captured in MINEDEX — i.e. nickel, alumina, and silicon smelters or refineries — but does not display MINEDEX prospects, exploration targets, occurrences, geological observations, most infrastructure types (excluding the smelters and refineries), and WABMINES mine features.

Information on petroleum fields in Western Australia (onshore and in State waters) and for adjacent offshore waters controlled by the Commonwealth is derived from a variety of sources, including DMP's 'Western Australian petroleum information management system' database (WAPIMS) and the 'Petroleum and Geothermal' section of DMP's website. Only major fields and recent major discoveries are shown, and are identified by a representative well for that field.

A total of 18 318 sites are plotted in this ATLAS, some with commodities displayed. The names of about 10% of those sites (1952 sites) are printed on the maps and appear in the index pages, with priority given to operating mines and larger deposits. All petroleum fields are named, and construction material mines belonging to the subset of DIMENSION STONE sites are also named and given the full symbol size. All other construction material sites

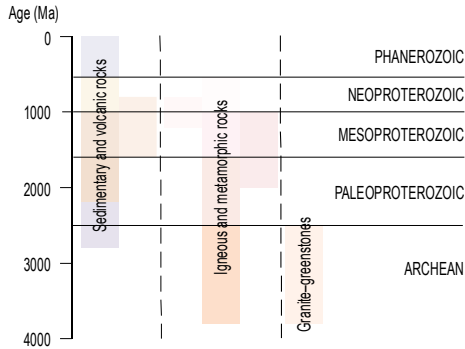

(e.g. for rock, aggregate, gravel, sand, limestone, etc.) are not named, nor assigned commodities, and are shown with a smaller symbol size.

The index at the back of the ATLAS categorizes named sites by their stage of development, using 'o' for operating sites and those currently being developed for commercial production, 'u' for undeveloped deposits and proposed mines, and 'c' representing closed operations, including historic minesites and those currently under care and maintenance as at January 2013. On the maps, named operating sites appear in black, whereas closed or undeveloped named sites are shown in grey. Commercial ownership of named sites (and projects) is listed in the index. Historic mine sites are not linked to current projects, so commercial ownership is left blank. Mineral commodities, ownership, stage of development, and location of each site have been extracted from the MINEDEX database, which is continually being updated. Digital downloads or live direct web-based enquiries, including an up-to-date extract of this map-specific data, are available from Online Databases at <www.dmp.wa.gov.au>.

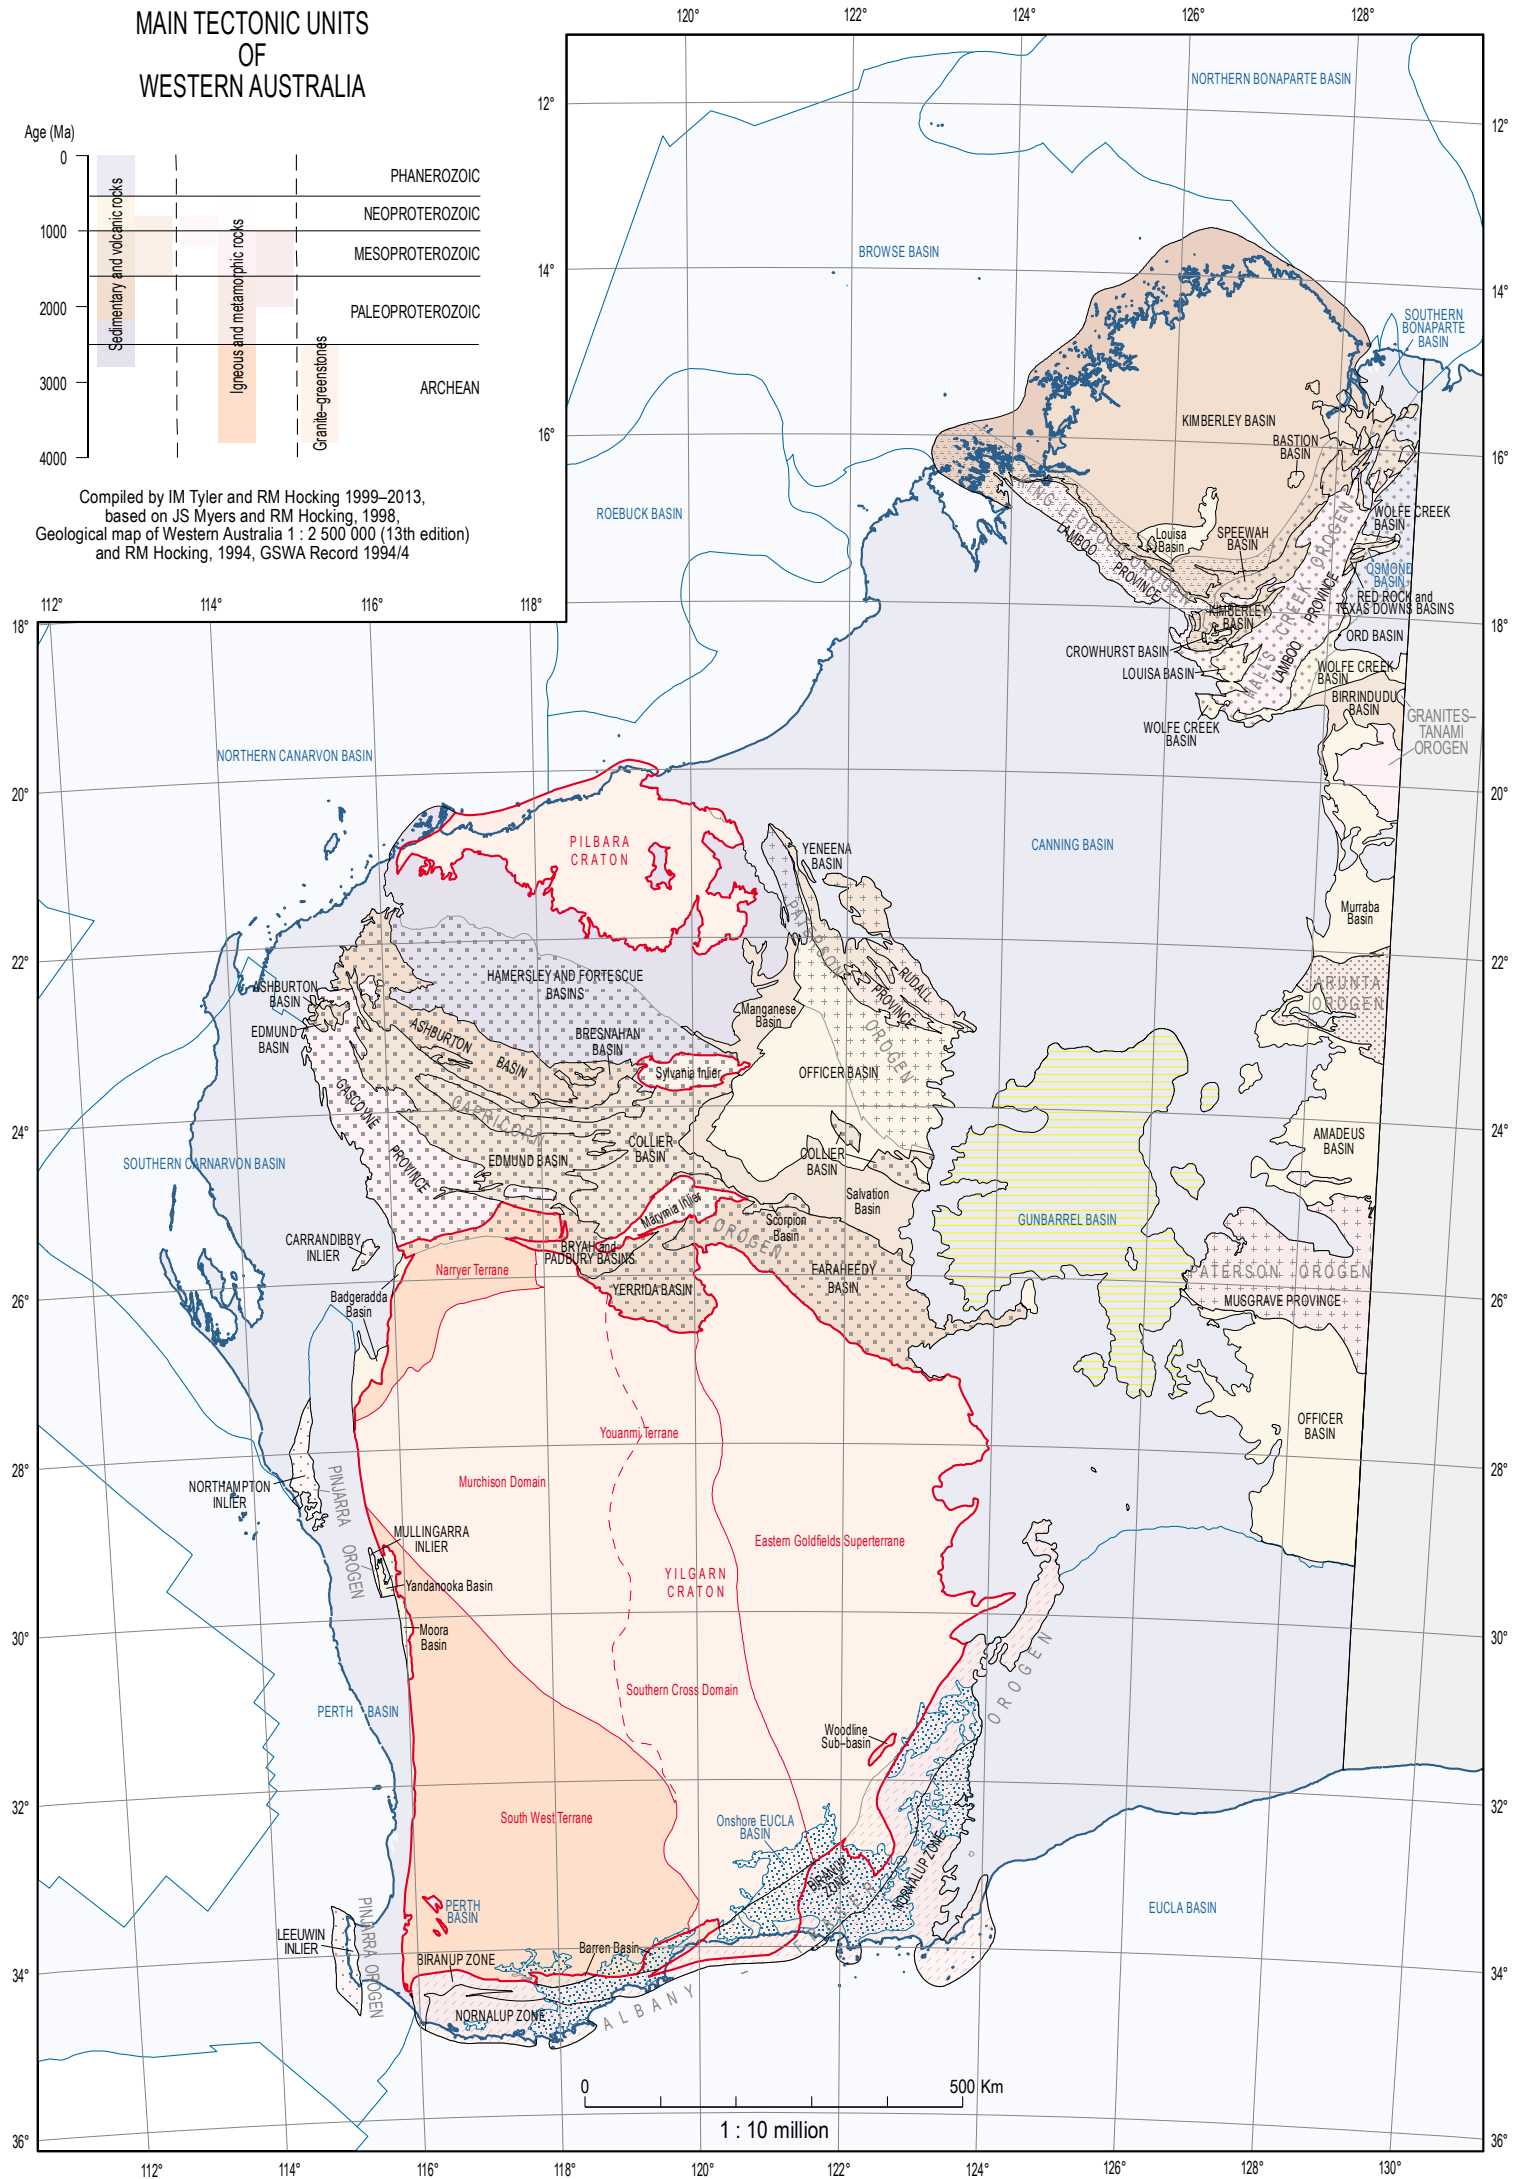

Further enquiries as to the status of the sites and projects included in this booklet can be made by email to Minedex@dmp.wa.gov.au. The locations and status of petroleum and non-mineral downstream processing operations can also be viewed on DMP's annually updated 'Major resource projects' map. Up-to-date information on Western Australian petroleum fields (onshore and in State-controlled waters) is available from the Petroleum Division of DMP. Field data for offshore Commonwealth-controlled waters is up-to-date as of mid-2012; enquiries for the latest information on fields in offshore waters should be addressed to the National Offshore Petroleum Titles Administrator (NOPTA) at info@nopta.gov.au, or to Geoscience Australia at energy@ga.gov.au.

All maps in this publication have been produced using the Albers Equal Area Projection (Geocentric Datum of Australia 1994), with central meridian 121°00'E and standard parallels 17°30' and 31°30'S.

TO LOCATE A PROJECT

Two code numbers are used to locate a site in this booklet. The first code number is the map number in this atlas, and the second represents the 1:100 000 map sheet number. From the four digit map sheet number, the first two digits give the east-west coordinate, and the second two digits the north-south coordinate.

0 500 km
1:10 million

This is a detailed geological map of the Kimberley region in Western Australia. The map shows the coastline of the Indian Ocean to the west and south, with various islands and reefs labeled, including Cockatoo Island, Koolan Island, and the Buccaneer Archipelago. The Dampier Peninsula is prominent in the center, with numerous towns and locations marked, such as Broome, Derby, and Kunene. The map also shows the boundaries of the Kimberley region and the Indian Ocean. The map is oriented with North at the top, and the coordinates 122° and 124° are marked at the bottom.

This geological map of the Warburton region in South Australia, Australia, displays a variety of geological features and mineral deposits. The map is overlaid with a grid showing latitude from 36°S to 48°S and longitude from 126°E to 129°E. Key geographical features include the Gibson Desert and Great Victoria Desert. Numerous geological ranges are identified, such as the Warburton Range, Central Range, Lehigh Range, and others. Mineral deposits are marked with symbols and labels, including Warburton (Cu, Ag), Babel (Ni, Cu, PGE, Co, Au), and various other locations like Tropicana and Decorative Cave. The map also shows major roads, rivers, and lakes.
