# EXPLORATION GEOCHEMISTRY OF WESTERN AUSTRALIA JUNE 2009

As part of the WA Government's Exploration Incentive Scheme (EIS), GSWA purchased in June 2009 the entire Terra Search surface and downhole geochemical database for WA. This DVD contains this dataset, an explanatory Terra Search report, a version of Terra Search's Explorer3 software, which can be used to interrogate and download the data in a variety of formats, and ESRI- and MapInfo-format GIS files for spatial analysis of the data.

The exploration geochemistry data were captured in a standard format by Terra Search from open-file mineral exploration reports, and validated for sample location data quality according to strict procedures. The dataset consists of more than 1.1 million data points relevant to multi-element geochemical analyses, across large areas of the State. It includes capture of 69 597 drillhole collars, 596 448 drillhole assays, and 136 343 drillhole geology observations.

To use this product you must:

- 1) Copy the data to your computer's hard disk by selecting 'Copy to hard disk' under 'Install Software' from the left panel (Total size 2.2 GB, approximately 15 minutes to complete).
- 2) Read the Explorer3 beginners guide provided on the disk, which provides a high level overview of the software supplied for interrogating and extracting the data. A more comprehensive description of this software is provided in the PDFs under 'Reports'.

The information on this disk remains the property of the Western Australia Department of Mines and Petroleum and is covered by Crown copyright. Copying or on-selling of these data without prior written permission of the Department of Mines and Petroleum will be seen as a breach of copyright.
