

## Mid West and Gascoyne, 2015: Basic raw material resources

This data package provides information on the potential availability of basic raw materials (BRM) that occur within the Mid West and Gascoyne regions. All main sources of BRM, which include sand, gravel, limestone, limesand, clay and rock aggregate, have been identified as have other major sites that are potential sources of these materials, taking into account a range of high-level planning and mining constraints. Quality information of the BRM, including particle size distribution of granular samples and chemical analyses of carbonate samples, are also presented for the Mid West and Gascoyne regions..

### Datasets featured:

#### Resource information

- Quarries and pits
- Limesand sample analyses
- Limestone sample analyses
- Sand and gravel sample analyses

#### Geology

- 1:100 000 regionally significant basic raw materials units
- 1:200 000 basic raw materials units
- 1:250 000 geology mosaic image

#### Mineralization and exploration

- Mining tenements (TENGRAPH)
- Mines and mineral deposits (MINEDEX)
- Extractive Industry Licences

#### Administrative data

- Class A National Parks and Nature Reserves
- Crown reserves

#### Topography

#### Remotely sensed information

- High resolution shaded relief
- Landsat Thematic Mapper (TM)
